The Bridge of Life Program

Bridge of Life (BOL), the primary program of DaVita Village Trust, improves access to primary care and dialysis treatment in underserved communities around the world while also focusing on prevention of kidney disease through early-detection testing and education. BOL serves thousands of men, women and children through four impact areas: kidney care, primary care, prevention and education, and medically-supported camps for kids.

In 2015, BOL will complete 47 medical missions, 32 chronic kidney disease (CKD) screenings, and 15 medical camps for kids, impacting more than 9,000 lives in the United States and abroad. BOL has changed the lives of patients and their families, our partners, those who live in the communities where we work, and the lives of our volunteers.

Learn more about Bridge of Life and how you can support our life-saving work by visiting www.davitavillagetrust.org.

Since 2006:

87 medical missions in 19 countries

56,000+ individuals screened for CKD

60,000 lives impacted
